

PROJECT MANAGEMENT OF LOCAL TODAY AND GLOBAL TOMORROW

A. What is Project?

Business functions due to operational limits outsource its core function to produce a unique product, result or service with a progressive planning for a defined time period to align or achieve business strategy. A project has various life cycles, phases and processes, depending upon the domain or application area these might be small, simple, short to large, complex and long. A successful team uses a defined approach balancing the competing demands of the business requirement employing the right project management methodology.

B. What is project management?

A successful manager has general management skills like planning, organizing, staffing of an ongoing operations along with interpersonal skills like effective communication, leadership, motivation, negotiation and conflict management. Project management is an application of right skills and techniques to deliver the expected unique product, results or services, effectively initiating, planning, executing, monitoring and control and closing all functions of scope,

costs, time, risks, quality, communications, hr, procurement and integration management.

C. What is PMP® certification?

We have hundreds of certifications for each profession in the industry like testing, safety, security, health, environment, infrastructure, BIFS, maturity, technology, software, and management. Project Management Institute (PMI) is an international body offering Project Management Professional (PMP) Certification for project manager roles. It continues to be the 'Best Specialty Certifications' worldwide and widely recognized. A PMP practitioner today is capable of managing projects successfully across industry not just locally but globally.

D. Where are we today?

There are quite a number of experienced project managers who have witnessed growth by applying their native skills in project management and create a mark in their application domain area. PMI recognizes such form of application area experts and expert judgment techniques in their knowledge areas. The advances in medicine, automobile, manufacturing, IT etc have really put India in

global radar. Even a common man is able to witness the sea change in terms of road, rail, shopping malls and IT parks all around today's metros. IT being the youngest of all industry has produced a great impact and is a cause of change but surprisingly it is this industry that has surfaced the need for global managers from its own maturity from being a service model to global delivery model today. Other industries like manufacturing, infrastructure, BIFS as well feel the vital role of good project management in their respective functions.

E. What are we tomorrow?

The need of the hour is not just a global delivery model in books, but to sustain it and be successful we require a global management model as we grow. With the wealth of operational excellence and best practices in management what we applied locally has to evolve in terms of global standards especially when Indian companies are acquiring multi nationals or working in close relationship. To keep with the pace of global changes and demands it has become imperative to have a globally recognized certificate in terms of management.

PROJECT MANAGEMENT OF LOCAL TODAY AND GLOBAL TOMORROW

F. What is the opportunity?

Getting PMP certification is an opportunity to learn and organize project management knowledge rather than believing it as another certification program. Passing the examination is not the end of it, be it tough or tougher. The aim is to contribute, recognize and apply the framework of project management processes that are universally accepted as good practices from different project experiences around the globe than to have another addition of feather as certificate to the cap.

G. Who can benefit?

Senior executives, managers, project office, contractors, consultants responsible but not limited to the management functions of quality, general, personnel, finance, procurement, design, engineering, construction, and software or hardware development.

H. What GURUTTAM offers?

Mr K Srikanth, PMP, (<http://guruttam.com>) through PMP®GURU program offer project management training across India to
